

WHAT GOES WITH WHAT?

A UMAP & hDBSCAN-cluster-analysis of the 4741 cocktails in the cocktail-database, according to their 500 ingredients. The plot shows the six most common ingredients for each cluster. Note how some clusters are highly coherent, like the vodka & tomato-juice-cluster (Bloody Mary), the gin, lime & egg-white-cluster (Silver Fizz) and the brandy, egg & benedictine-cluster (Eggnogg). Also, dry vermouth and gin go well together, who would have thought.
